

Who We Are?

For over 20 years Falcon has established ourself as the leading manufacturer of Asphalt Hot Boxes. We believe that when repairing roads, the right equipment matters, and our customers agree. That is why our machines are used by thousands of local and state agencies as well as many contractors across the United States and Canada.

What does a Hot Box do?

Rapidly cooling asphalt is extremely challenging to work with and can lead to poor-quality patch jobs with a high failure rate. A hot box is a purpose-built machine that maintains the asphalt at optimal working temperatures throughout the day. This allows you to make permanent patches everyday.

What sets us apart?

- ✓ VIP Technology
- ✓ Patented Heat Management
- ✓ Largest Material Unloading Door
- ✓ Longest Warranty Program

Better Equipment! Better Roads!
